

## The Ultimate Hospitality Software Stock Control made Simple

For complete and comprehensive control over your Point Of Sale system, you need iControl. This newly developed software has a simple layout, providing easy navigation for the end user, which makes everyday use of the system a breeze. These developments have come through many years of experience gained by our staff in the hospitality industry. At Finchcorp Systems, we have members of staff that have been installing POS systems into hospitality venues since 1987. The experience gathered over the years has empowered us with an intricate knowledge of what is expected and required from a back office system. This knowledge has flowed through to the development of iControl, which gives you control of your business.

### Streamline operations

- Automate internal systems
- Integrate point of sale and stock control
- Optimise stock levels
- Download invoices from most liquor groups
- Improve efficiency and time management
- Control a multi venue operation from a single location

### Increase Profitability

- Instant access to key business performance indicators
- What is selling
- Which items are slow moving
- What your margins are on items

### Improve Service Delivery

- Quicker more reliable delivery at the register
- Integrate to loyalty programs
- Interface to most gaming packages
- Timed and volume (mix and match) promotions
- Promotions automatically start and finish according to scheduling

### Security

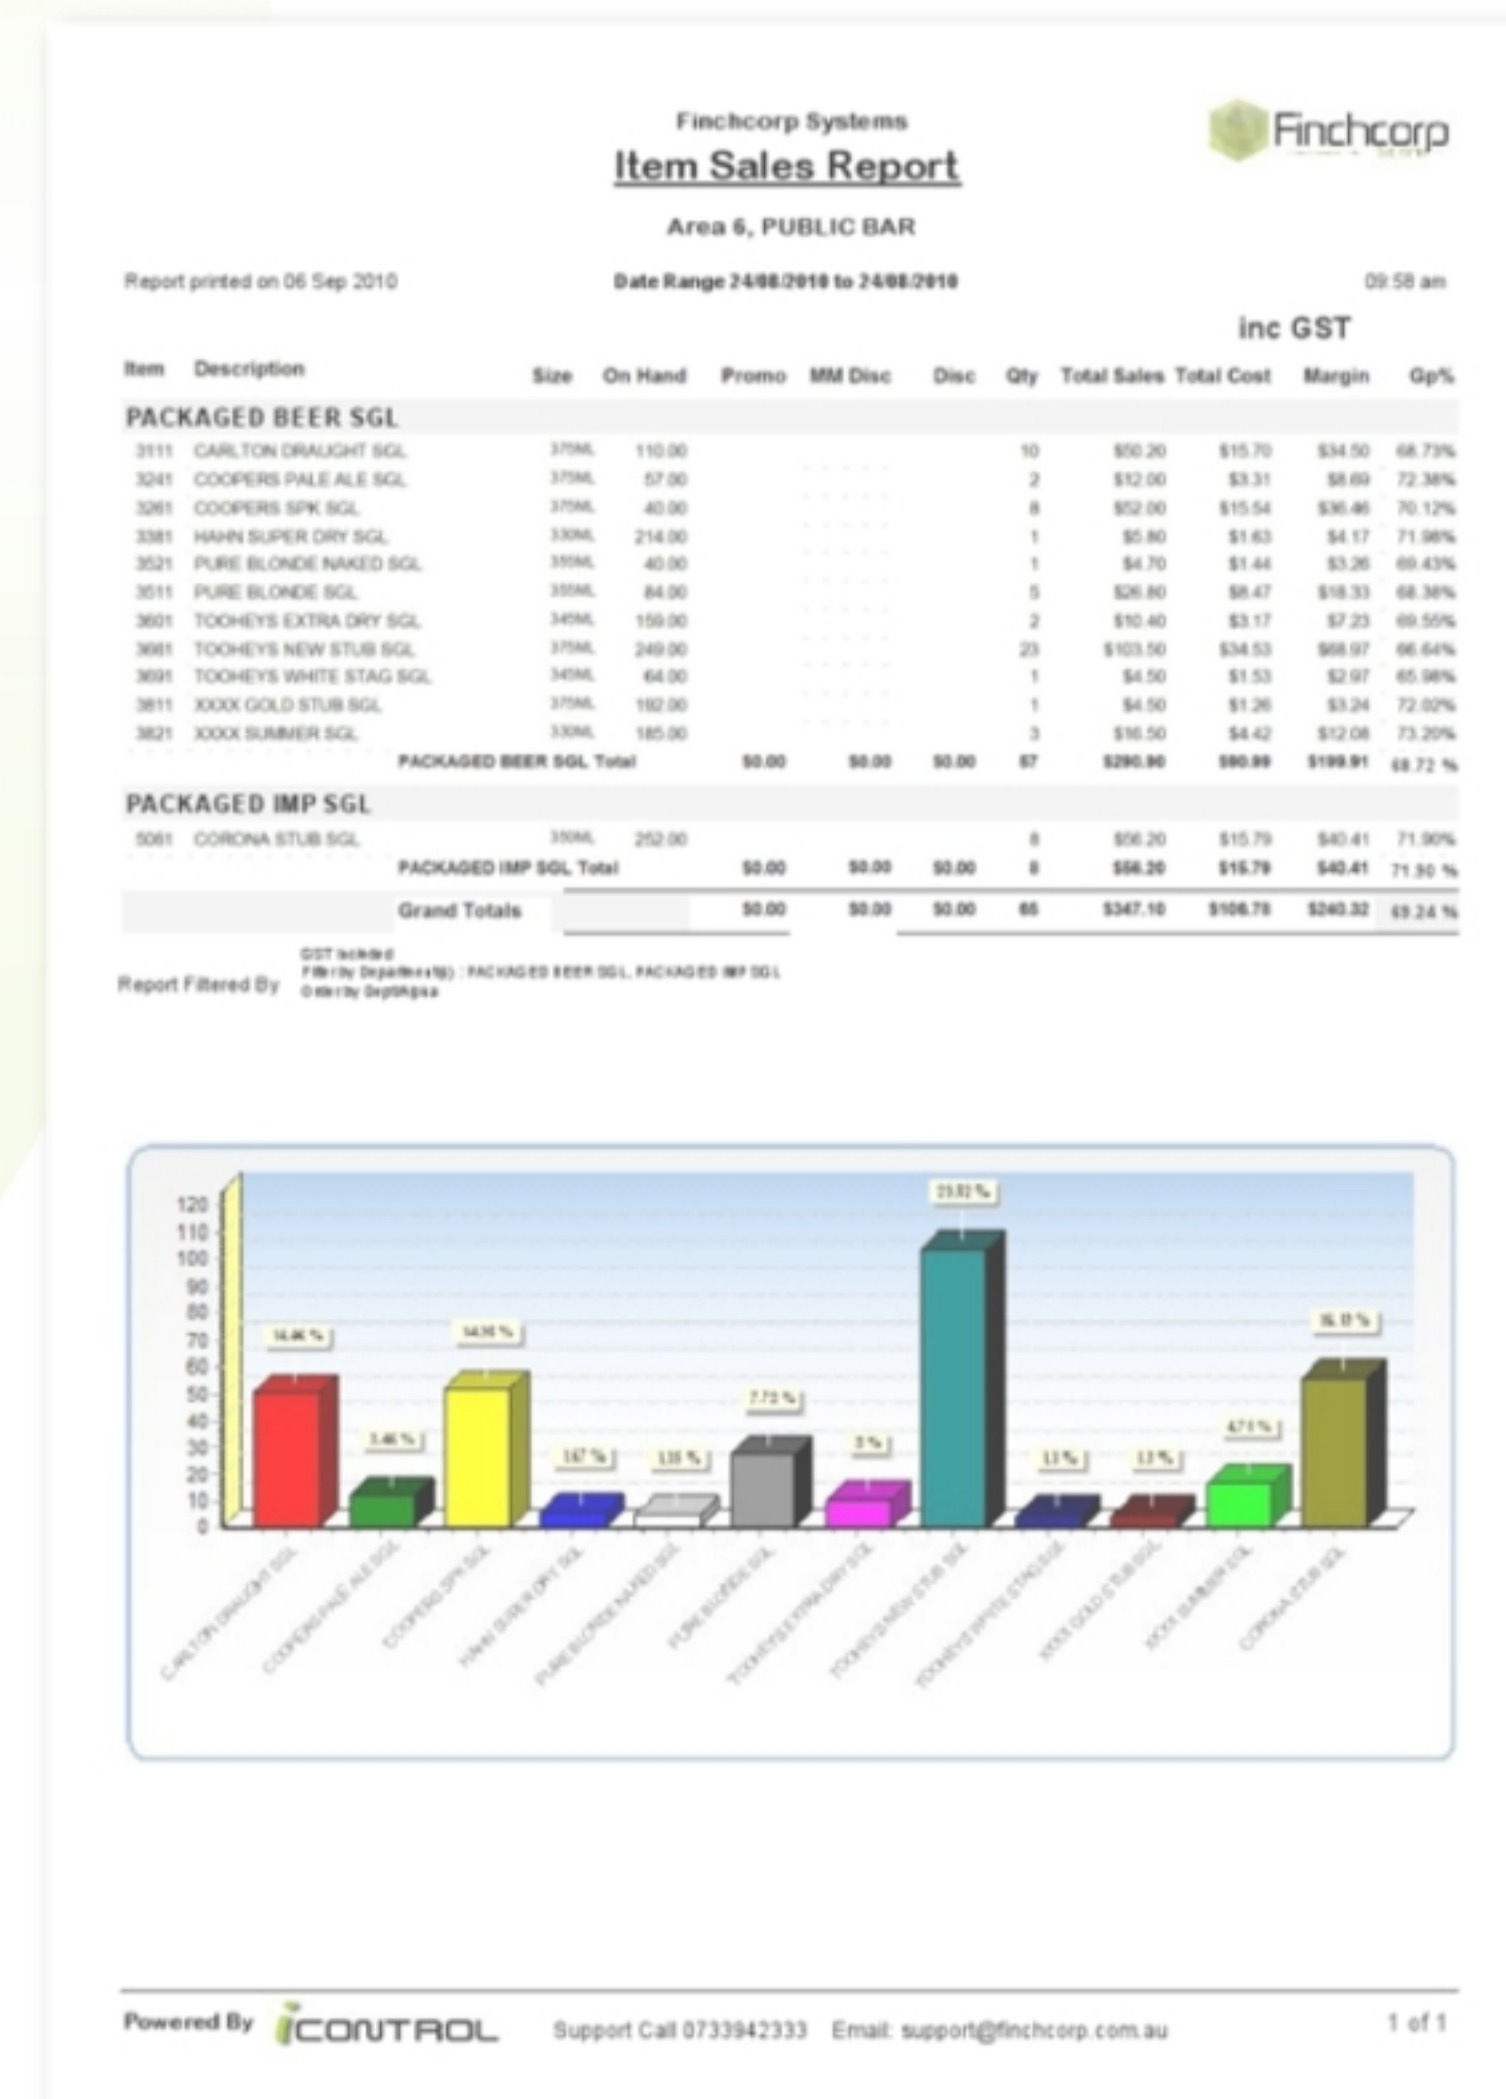

- Individual clerk setting determine what functions are accessible to staff members

### Custom Reports and Printing

- Report generator to create venue specific reports
- Customize your reports to suit your requirements
- Design and print specific price ticketing
